VILLAGE OF MIDVALE TUSCARAWAS COUNTY, OHIO

CONTRACT 3 – MIDVALE SYSTEM WATER METERS

ADDENDUM #1

February 12, 2024

THRASHER PROJECT #T10-11063

TO WHOM IT MAY CONCERN:

The following are clarifications and responses to questions posed by contractors for the above-referenced project.

A. SPECIFICATIONS

- 1. Summary Specification 011000 section 1.6B has been revised to include EPA-recommended environmental specifications. (REPLACE SPEC 011000 WITH ATTACHED. ADDED ENVIRONMENTAL SPECS AFTER 011000, ATTACHED)
- 2. Price and Payment Specification 012000 section 1.6F has been revised to include a provision regarding meter maintenance under Bid Items 3, 4, 5, and 6. (REPLACE SPEC 012000 WITH ATTACHED)
- 3. Pursuant to Water Service Connections Specification 331213 section 2.5, Ferguson Master Meter is an approved equal for water meter installation. The Ultrasonic Integrated Polymer Sonata Meter is approved for ¾-inch and 1-inch meters, and the Ultrasonic Octave Meter with Nicor Connection Module is approved for the 2-inch and 3-inch meters.

If you have any questions or comments, please feel free to contact me at your earliest convenience at <u>gdavis@thethrashergroup.com</u>. As a reminder, bids will be received until 2:00 p.m. on Tuesday, February 27, 2024, at The Thrasher Group, 400 3rd St SE, Suite 309, Canton, OH 44702. Good luck to everyone and thank you for your interest in the project.

Sincerely,

THE THRASHER GROUP, INC.

Glenn Davis, PE, CFM

Project Manager

R:\010\T10-11063.00-Village of Midvale Meters & Lines-Village of Midvale-\Documents\Bid Phase\Contract 3 - Midvale System Water Meters\2 Addendum\Addendum 1

SECTION 011000 - SUMMARY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract Documents, including General and Supplementary Conditions, and all related Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Project information.
 - 2. Work covered by Contract Documents.
 - 3. Access to site.
 - 4. Specification and drawing conventions.

1.3 PROJECT INFORMATION

- A. Project Identification: Contract 2 Vernon Rd and Bean Alley Water Lines
 - 1. Project Location: Midvale, OH
- B. Owner: Village of Midvale
 - 1. Owner's Representative: (To be Determined at the Pre-Construction Conference.)
- C. Engineer: The Thrasher Group, Inc.
- D. Contractor: (To be Determined by Bidding)

1.4 WORK COVERED BY CONTRACT DOCUMENTS

- A. The Work of Project is defined by the Contract Documents and consists of the following:
 - 1. Replacement of 1,700 feet of water mains and related appurtenances along Vernon St. and Bean Alley.
- B. Type of Contract.
 - 1. Project will be constructed under <u>multiple</u> contracts.
 - a. Replace 1,700 feet of water mains within Vernon St and Bean Alley.

b. Install approximately 900 new meters and pits within the Village of Midvale and its surrounding communities.

1.5 ACCESS TO SITE

A. General: Contractor shall have full use of Project site for construction operations during construction period. Contractor's use of Project site is limited only by Owner's right to perform work or to retain other contractors on portions of Project.

1.6 SPECIFICATION AND DRAWING CONVENTIONS

- A. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:
 - 1. Imperative mood and streamlined language are generally used in the Specifications. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.
 - 2. Specification requirements are to be performed by Contractor unless specifically stated otherwise.
- B. General Requirements: Requirements apply to the Work of all Sections in the Specifications. EPA-recommended environmental specifications are included on the following pages. Where other drawing notes or specifications differ from the EPA-recommended specifications, the EPA-recommended specifications take precedence.
- C. Drawing Coordination: Requirements for materials and products identified on Contract Drawings are described in detail in the Specifications. One or more of the following are used on Contract Drawings to identify materials and products:
 - 1. Terminology: Materials and products are identified by the typical generic terms used in the individual Specifications Sections.
 - 2. Abbreviations: Materials and products are identified by abbreviations scheduled on Drawings.
 - 3. Keynoting: Materials and products are identified by reference keynotes referencing Specification Section numbers found in this Project Manual.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

- A. The following is the sequence of construction:
 - 1. The contractor shall saw cut the pavement.
 - 2. Excavate and install the new 6" water main, valves, and hydrants.
 - 3. Charge and test the water main.
 - 4. Install the new service lines and curb stops.
 - 5. Abandon in place by grouting the existing water line.

1. Prohibited Construction Activities

- a. Disposing of excess or unsuitable excavated material in wetlands or floodplains, even with the permission of the property owner;
- b. Locating stockpile storage areas in environmentally sensitive areas;
- c. Indiscriminate, arbitrary, or capricious operation of equipment in any stream corridors, any wetlands, any surface waters, or outside the easement limits;
- d. Pumping of sediment-laden water from trenches or other excavations directly into any surface waters, any stream corridors, any wetlands, or storm sewers; all such water will be properly filtered or settled to remove silt prior to release;
- e. Discharging pollutants such as chemicals, fuels, lubricants, bituminous materials, raw sewage and other harmful waste into or alongside of rivers, streams, impoundments, or into natural or man-made channels leading thereto;
- f. Permanent or unspecified alteration of the flow line of any stream;
- g. Damaging vegetation outside of the construction area;
- h. Disposal of trees, brush, and other debris in any stream corridors, any wetlands, any surface waters, or at unspecified locations;
- i. Open burning of project debris without a permit;
- j. Discharging injurious silica dust concentrations into the atmosphere resulting from breaking, cutting, chipping, rilling, buffing, grinding, polishing, shaping or surfacing closer than 200 feet to places of residences or commercial, professional, quasi-public or public places of human occupation;
- k. Storing construction equipment and vehicles and/or stockpiling construction materials on property, public or private, not previously specified on the plans by the engineer for such purposes;
- I. Running well point or pump discharge lines through private property or public property and rights-of-way without the written permission of the property owner and the consent of the engineer;
- m. Operations entailing the use of vibratory hammers or compactors outside the hours or 8:00 am and 5:00 p.m. or outside the hours allowed for construction by local ordinances or regulations; and

- n. Closing off clear access to any public alley, street, road, avenue or boulevard without the prior consent of municipal officials and the engineer, and closing clear access:
 - by fire protection equipment and emergency vehicles;
 - by the public to any commercial or professional place of business, quasipublic or public establishment, or place of residence; or
 - by vehicles to driveways without the provision of alternative means of building ingress and egress.

2. Mitigative Measures

Erosion/Sediment Control

- Site clearing and grubbing shall not commence until such time that the contractor is prepared to start construction. Remove only those trees, shrubs, and grasses that must be removed for construction of actual facilities; protect the rest to preserve their aesthetic, habitat, and erosion control values.
- 2. Immediately following site and access clearing, temporary erosion and sedimentation controls shall be installed. They will be maintained in effective operating condition during construction until final seeding and site restoration occurs.
- 3. At the WWTP construction site, install sediment basins and diversion dikes before disturbing the land that drains into them.
- 4. Diversion channels will be constructed around the WWTP construction site to collect runoff and prevent silt and other erodible materials from entering local drainage courses. Diversion channels will flow to temporary sediment basins, and are to be stabilized through seeding, riprapping, or lining them with plastic.
- 5. Existing topsoil will be stockpiled and replaced upon final grading of the WWTP construction site.
- 6. Extensive areas of stockpiled topsoil at the WWTP construction site are to be protected through the use of temporary seeding and mulching or covering such as with anchored straw mulch. Silt barriers will be installed down gradient of these areas on contour and with their ends up slope of the contour to prevent silt laden runoff from entering waterways or storm sewers. Within 15 days of completion of construction, any remaining soil must either be removed or permanently stabilized.

- 7. Silt fences should be trenched six to twelve inches deep, the fabric laid in the trench, and the soil properly backfilled into the trench to prevent undercutting.
- 8. Where trench excavation occurs parallel to any waterway, a vegetated barrier should be maintained between the stream and the construction site. All trench spoils will be stockpiled on the side of the trench away from the waterway, and a line of silt barriers will be established along the edge of construction on the contour between the trench and the waterway.
- 9. No more than 200 feet of trench shall be open at any given time. Trench opening and laying of pipe should occur so as to minimize the amount of disturbed area. All trenches are to be backfilled and compacted immediately after pipe installation. Immediately following the backfilling of the trench, the ground surface will be rough graded to the existing contours to allow for proper drainage, and will be seeded and/or mulched in stages to prevent erosion.
- 10. Any disturbed area that will not be actively under construction for a period of 15 days or more will be temporarily stabilized immediately by seeding and mulching or by anchored straw mulch.
- As construction is completed, permanently stabilize each disturbed area in stages with perennial vegetation installed according to Ohio EPA (or equivalent) standards and specifications. After final soil settling over the sanitary sewer, outfall sewer, and force main alignments, the contractor shall bring the trench back to grade if necessary, place topsoil, and fine grade, seed, fertilize, and mulch all areas disturbed by activities associated with the construction of that section of pipe. Final grading will be consistent with preconstruction topography for drainage and aesthetic reasons.
- 12. Boring pits (for jack and bore locations) shall be surrounded with silt barriers to prevent erosion of the excavated pit material. Storm sewer inlets will be surrounded with silt barriers to prevent siltation.
- 13. Slopes exceeding 15 percent or that tend to be unstable require special treatment such as water diversion berms, sodding, or the use of jute or excelsior blankets.
- 14. When borrow material is obtained from other than commercially operated sources, erosion of the borrow site will be so controlled both during and after completion of the work that erosion will be minimized and sediment will not enter streams or other bodies of water. Waste or disposal areas and construction roads shall be located and constructed in a manner that will keep sediment from entering streams. Temporary erosion control barriers and limited site clearing will be used as needed.

- 15. If work is suspended for any reason, the contractor shall maintain the soil erosion and sedimentation controls in good operating condition during the suspension of the work. Also, when seasonal conditions permit and the suspension of work is expected to exceed a period of one month, the contractor shall seed, fertilize, and mulch all disturbed areas left exposed when the work is stopped.
- 16. Install the above erosion and sediment control measures, as appropriate, referring to Ohio EPA, Storm Water Technical Assistance, Rainwater and Land Development Manual standards and specifications (formerly ODNR) or equivalent for particular techniques. These measures are to be maintained in effective working condition during construction and until all disturbed areas have been permanently stabilized. Link: Rainwater and Land Development | Ohio Environmental Protection Agency.

Traffic Control

- 17. At least one lane of traffic must be maintained along the travel route to the construction site.
- 18. Access must be maintained for emergency vehicles at all times.
- 19. No trench will be left open at the end of a workday, where practical; any open trench will be properly identified and barricaded for safety purposes.
- 20. Any construction equipment or excavations near roads must be marked with lights, reflectors, oil lanterns, or smudge pots.
- 21. The contractor shall provide, erect and maintain all necessary barricades, warning signs, danger signals, flag person(s), watchers, and all other appropriate precautions necessary for the protection of the work and for safety.
- 22. Prior to closing off clear access to any public alley, street, road, avenue, or boulevard, the contractor must have consent from local officials and the Engineer.

Air Pollution/Noise Control

- 23. Construction activities will be limited to daytime hours.
- 24. Construction equipment will be provided with intake silencers and mufflers, as required by safety standards.
- 25. All construction vehicles should be equipped with proper emissions control equipment.
- 26. Periodically check equipment and machinery for proper tuning to minimize exhaust emissions and noise.

^{27.} Unpaved areas will be wet down (as necessary) during construction to EPA-Recommended Evironmental Specifications (placed after spec 0 7000) mize dust generation.

Tree/Vegetation Protection

- 28. Tree removal will be limited to that necessary for construction and will be limited further to the permanent easement wherever possible.
- 29. No tree removal will be permitted outside the temporary easement without permission of the engineer.
- 30. Trees which are not removed will be protected by ensuring that trees to be removed are felled so as not to injure the remaining trees.
- 31. Prior to clearing, the contractor and engineer, shall walk the acquired easements in an effort to designate the trees that are to be saved. Trees to be saved will be clearly marked by paint with the letter "S". Trees to be protected by an appropriate barrier shall be marked with an "S" enclosed in a circle.
- 32. Soil and other material will not be stored next to or within the dripline of trees.
- 33. Preservation of landscaping should take precedence over removal. If removal or damage is unavoidable, existing vegetation should be repaired or replaced "in-kind" unless the homeowner specifies otherwise.
- 34. If trees/shrubs cannot be replaced in the same location due to installation of the sewer system, relocation should be considered.
- 35. The contractor's arborist shall repair all injuries to bark, trunks, limbs, and roots of remaining vegetation by properly dressing, cutting, bracing and painting, using only approved tree surgery methods, tools, and materials.
- 36. Selective pruning of tree limbs prior to initiation of construction should only be used within established easements where removal is necessary for operation of equipment.
- 37. Limit the use of riprap to areas where stream flow conditions preempt vegetative stabilization.

Dewatering

- 38. All dewatering flows are to be settled in siltation basins or directed through filtering devices before discharge to stabilized sites, such as streams or storm sewers; <u>not</u> onto exposed soils, stream banks, or any other site where the flow could cause erosion.
- 39. Silt from construction operations shall not be permitted to enter the storm sewer system. When construction occurs near storm sewer inlets, erosion control measures such as inlet filters and hay bales shall be used to prevent silt from entering the storm sewers.

40. Convey water from the construction site in a closed conduit. Do not use trench excavations as temporary drainage ditches.

Stream Crossings

- 41. When clearing vegetation prior to initiating stream crossing work, streambank trees, shrubs, and other vegetation should be left in place to help control erosion; where equipment operation requires tree removal, stumps and roots are to remain in place to help anchor the streambank.
- 42. Prior to the onset of any stream crossing, silt barriers shall be placed along the banks where vegetation removal has occurred or is anticipated, exposed soil exists, and/or spoils or other fill materials are to be stockpiled within 50 feet of the stream.
- 43. Construction within a stream will be continued until completed. A stream crossing shall not be initiated unless the contractor is prepared to finish the work immediately. Also, work must not be initiated unless time and weather constraints have been provided for. Stream crossing work shall be restricted to periods of dry weather and low-flow or no-flow conditions.
- 44. Restoration should include the re-establishing of channel contours and bank stabilization and should be initiated immediately after the crossing is completed.
- 45. When using open cut methods for laying sewer pipe across intermittent or very small streams, the stream crossing and associated restoration must be performed within a 48-hour period. The stream crossing and associated restoration must be performed within a one-week (seven day) period if the crossing involves temporary diversion of a small to moderate size stream and encasement of the sewer in concrete.
- 46. The width of the easement for the stream crossing should be restricted to only that necessary to perform the work.
- 47. Boring pits (for jack and bore crossings) should be surrounded with silt fences or hay bales to prevent erosion of the excavated pit material.
- 48. Construction equipment shall be kept out of the stream channel whenever possible.

Archaeological/Historical Resources

49. Contractors and subcontractors are required under Ohio Revised Code (O.R.C.) Section 149.53, to notify Ohio's State Historic Preservation Office (SHPO), and to cooperate with that office in archaeological and historic surveys and mitigation efforts if such discoveries are uncovered within the project area.

Kristen Koehlinger, Resource Protection & Review Department Head

Phone: 1-614-298-2000

Email: kkoehlinger@ohiohistory.org

Ground Water/Drinking Water Protection

- 50. Construction activity will occur within a Drinking Water Source Protection Area or designated Sole Source Aquifer. A chemical spill in this area poses a threat to the drinking water.
- 51. Minimize quantities of bulk fluids related to construction activities in the project area and store bulk fluids outside of the sanitary isolation radius of all existing drinking water wells in an appropriately designed apparatus that provides both safe storage and effective spill containment.
- 52. Avoid equipment maintenance activities within the drinking water source protection area.
- 53. Report all spills to the Applicant and to the Ohio EPA Spill Hotline at 1-800-282-9378.
- 54. Post the Ohio EPA Emergency Spill Hotline number (1-800-282-9378) at the project site.
- 55. Inform all contract employees of the sensitivity to ground water within the project construction zone.

SECTION 012000 - PRICE AND PAYMENT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract Documents, including General and Supplementary Conditions, and all related Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Cash allowances.
- B. Schedule of Values.
- C. Application for Payment.
- D. Measurement and Payment

1.3 CASH ALLOWANCES (If provided in the Bid Form)

- A. Costs Included in Cash Allowances: Cost of product to Contractor or Subcontractor, less applicable trade discounts; delivery to Site and applicable taxes unless stated otherwise in Allowance Schedule.
- B. Costs Not Included in Cash Allowances but Included in Contract Sum/Price: Product handling at Site including unloading, uncrating, and storage; protection of products from elements and from damage; and labor for installation and finishing unless stated otherwise in Allowance Schedule.

C. Engineer Responsibilities:

- 1. Consult with Contractor for consideration and selection of products suppliers and installers.
- 2. Select products in consultation with Owner and transmit decision to Contractor.
- 3. Prepare Change Order.

D. Contractor Responsibilities:

- 1. Assist Engineer in selection of products, suppliers, and installers.
- 2. Obtain proposals from suppliers and installers and offer recommendations.
- 3. Upon notification of selection by Engineer, execute purchase agreement with designated supplier and installer.
- 4. Arrange for and process Shop Drawings, Product Data, and Samples. Arrange for delivery.
- 5. Promptly inspect products upon delivery for completeness, damage, and defects. Submit claims for transportation damage.

Village of Midvale T10-11063

Contract 3 - Midvale System and Water Meters

- E. Differences in costs will be adjusted by Change Order.
- F. Allowance Schedule: If provided in and as per the Bid Form
- G. Differences in cost between allowance(s) and actual cost(s) will be adjusted by Change Order.
- 1.4 SCHEDULE OF VALUES (As required for Lump Sum Project or Bid Item Breakdown on Unit Price Project)
 - A. Submit printed schedule on Progress Estimate schedule on EJCDC C-620.
 - B. Submit Schedule of Values within 20 days after date established in Notice to Proceed.
 - C. Format for Lump Sum Project: Use Table of Contents of this Project Manual. Identify each line item with number and title of major Specification Section.
 - D. Revise schedule to list approved Change Orders with each Application for Payment.

1.5 APPLICATION FOR PAYMENT

- A. Submit six (6) executed copies of each Application for Payment on EJCDC C-620 Contractor's Application for Payment.
- B. Submit six (6) copies of executed copies of Abnormal Weather Conditions forms regardless if any days are claimed or not and Affidavit of Payment.
- C. Submit six (6) American Iron and Steel Qualifying and De Minimus Materials List (if required by the Contract Documents).
- D. Payment Period: Submit at intervals stipulated in the Agreement.

1.6 MEASUREMENT AND PAYMENT

- A. Take measurements and compute quantities. Engineer will verify measurements and quantities.
- B. Unit Quantities: Quantities and measurements indicated on Bid Form are for Contract purposes only. Actual quantities provided shall determine payment.
- C. Payment Includes: Full compensation for required labor, products, tools, equipment, plant and facilities, transportation, services and incidentals; erection, application, or installation of item of the Work; overhead and profit.
- D. Final payment for Work governed by unit prices will be made on basis of actual measurements and quantities accepted by Engineer multiplied by unit sum/price for Work incorporated in or made necessary by the Work.
- E. Measurement of Quantities:

Village of Midvale T10-11063

Contract 3 - Midvale System and Water Meters

- 1. Weigh Scales: Inspected, tested, and certified by state in which work is being performed or state of origin of materials within past year.
- 2. Platform Scales: Of sufficient size and capacity to accommodate conveying vehicle.
- 3. Metering Devices: Inspected, tested, and certified by state in which work is being performed or state of origin of materials within past year.
- 4. Measurement by Weight: Concrete reinforcing steel, rolled or formed steel, or other metal shapes will be measured by handbook weights. Welded assemblies will be measured by handbook or scale weight.
- 5. Measurement by Volume: Measured by cubic dimension using mean length, width, and height or thickness.
- 6. Measurement by Area: Measured by square dimension using mean length and width or radius.
- 7. Linear Measurement: Measured by linear dimension, at item centerline or mean chord.
- 8. Stipulated Sum/Price Measurement: Items measured by weight, volume, area, or linear means or combination, as appropriate, as completed item or unit of the Work.

F. Payment

1. **BID ITEMS**

Bid Item 1 – Mobilization – Lump Sum

- A. This work shall be paid for at the lump sum bid price for construction preparatory operations including, but not limited to, the movement of personnel and equipment to the project site and the establishment of field office(s), building(s), and/or other facilities, payment of all bonding and insurance costs incurred by the Contractor, and the installation of the project sign if a sign is required in the Supplemental General Conditions.
- B. In no case shall the lump sum bid price for Mobilization exceed five percent (5%) of the total bid. Partial payment not exceeding three percent (3%) of the awarded total contract bid price shall be made as part of the first application for payment after mobilization is completed. The balance of this lump sum bid price shall be paid for as part of the first application for payment after final completion.
- C. No deduction shall be made, nor shall any increase be made, in the lump sum bid price for Mobilization regardless of any decreases or increases in the final total contract price or for any other cause.
- D. No additional compensation shall be made.

Bid Item 2 – Maintaining Traffic – Lump Sum

- A. See Section 015700 Traffic Control
- B. This work shall be paid for at the lump sum bid price.
- C. No additional compensation shall be made.

Bid Item 3 – 3/4 Inch Meter - Per Each

Bid Item 4 – 1 Inch Meter - Per Each

Bid Item 5 – 2 Inch Meter - Per Each

Village of Midvale Contract 3 - Midvale System and Water Meters T10-11063

Bid Item 6 – 3 Inch Meter – Per Each

- A. See Section 331213 Water Service Connections
- B. The cost for a new meter setting shall include, but not be limited to, locating of the existing service line, installation of a new meter pit, meter setting, meter, pit set module, and up to five feet (5') of new service line, the connection to the existing service line as required, and all other appurtenances required in the Drawings and/or Specifications.
- C. All other new service tubing will be included in the bid price(s) for the bid item(s) for which the tubing is required.
- D. The cost of landscaping, Restoration of Disturbed Area, Concrete Resurfacing, Crushed Stone Resurfacing, and Asphalt Paving shall be included in the lump sum bid price(s) and/or unit bid price(s) for the bid item(s) for which surface restoration is required. No additional compensation shall be made.
- E. The cost for each new meter shall also include the first ten years of annual maintenance costs paid to the meter provider for training, service, software, billing, troubleshooting, hosting, and other related maintenance costs required for operation and billing of each meter.

Bid Item 7 – Landscaping – Lump Sum

- A. See Section 329119 Landscaping
- B. The cost of this work shall be paid for at the lump sum bid price(s) and/or unit bid price(s) as provided in the Bid Form for reclamation or restoration of pipelines.
- C. No additional compensation shall be made.

2. INCIDENTAL ITEMS

<u>General Conditions, Supplemental General Conditions, Specification Section 011000</u> <u>through 017839 Except for General Conditions - Mobilization/Demobilization, Section 015000 - Temporary Facilities and Controls and Section 015700 Traffic Control.</u>

- A. The cost of this work shall be included in the lump sum bid price(s) and/or unit bid price(s) for the bid item(s) for which it is required.
- B. No additional compensation shall be made.

Section 015000 – Temporary Facilities and Controls

- A. Temporary facilities and controls, including but not limited to a Field Office and Sheds, shall be included in the lump sum bid price for Mobilization.
- B. No additional compensation shall be made.

Section 312316 – Excavation

A. The cost of this work shall be included in the lump sum bid price(s) and/or unit bid price(s) for the bid item(s) for which excavation is required. No additional compensation shall be made.

Village of Midvale T10-11063

Contract 3 - Midvale System and Water Meters

B. Unless otherwise provided, all excavation shall be unclassified regardless of the material encountered. No additional compensation shall be made for rock or any soft or otherwise unsuitable material. No additional compensation shall be made for dewatering and/or sheet piling.

Section 312500 - Erosion and Sedimentation Controls

- A. This work shall be included in the lump sum bid price(s) and/or unit bid price(s) for the bid item(s) for which Erosion and Sediment Controls are required.
- B. All operation and maintenance costs as well as recordkeeping and reporting costs shall be included.
- C. No additional compensation shall be made.

Section 331200 - Water Utility Distribution Equipment

Incidental

- A. The cost for work in this section will be paid for by the lump sum or unit bid price(s) for the Bid Items requiring the activity which includes materials and installation.
- B. No additional compensation shall be made.

General Specifications

A. The contract Specifications references provided attempt to outline the Contract Bid Item payment methodology for work to be performed. In the event of variation between the Bid Form and the preceding specification section measure and payment descriptions, the Contractor shall contact the Engineer before making any assumptions and proceeding with the Bid Item work or part thereof in question.
